

Case Study: FreshKart Retail Sales Analysis (Basic Charts)

1. Background

FreshKart is a fast-growing FMCG and grocery retail company operating across India.

The company sells products in multiple categories such as **Food, Dairy, Beverages, and Personal Care**, and distributes them across major regions including **North, South, East, and West India**.

To understand performance and make data-driven decisions, FreshKart wants to analyze its monthly sales, regional performance, product mix, and profitability trends using **Basic Charts in Power BI**.

You are working as a **Junior Data Analyst**, and your task is to build basic but business-impactful visuals for leadership decision-making.

2. Objective of the Analysis

The main objective is to use **Basic Power BI Charts** to answer the following business questions:

- Which months generate the highest and lowest sales?
 - Which regions perform better compared to others?
 - What is the overall sales trend over time?
 - How does sales volume behave month-by-month?
 - What is the monthly contribution of different product categories?
 - How do Sales and Profit move together across months?
-

3. Business Problems & Requirements (Visual-wise)

A) Monthly Sales Comparison

Business Problem:

Management wants to identify peak and low-performing months.

Business Requirement:

Create a visual that clearly compares total sales month-wise.

Visual Used:

Column Chart (Month on X-axis, Sales on Y-axis)

Insight/Decision:

- Highest sales months → Stock up and increase supply.
 - Lowest sales months → Introduce discount schemes or marketing campaigns.
 - Helps detect seasonality patterns.
-

B) Regional Performance Comparison

Business Problem:

Which region drives maximum revenue?

Business Requirement:

Compare sales across regions using an easy comparative chart.

Visual Used:

Bar Chart (Region on Y-axis, Sales on X-axis)

Insight/Decision:

- Strong regions → Expand distribution, launch premium products.
 - Weak regions → Increase sales reps, target marketing.
-

C) Sales Trend Over Time**Business Problem:**

Is the sales trend moving up or down?

Business Requirement:

Show month-wise sales movement.

Visual Used:

Line Chart

Insight/Decision:

- Decreasing trend → Promotional offers required.
 - Increasing trend → Scale up inventory and resources.
 - Supports forecasting and planning.
-

D) Overall Sales Volume**Business Problem:**

Operations team wants to understand scale and volume of monthly sales.

Business Requirement:

Show both trend and magnitude.

Visual Used:

Area Chart

Insight/Decision:

- High-volume months → Increased warehouse space needed.
 - Low-volume months → Optimize logistics and supply chain planning.
-

E) Category Contribution per Month**Business Problem:**

Leadership wants to know which product categories contribute most to monthly sales.

Business Requirement:

Display total monthly sales along with category-wise breakdown.

Visual Used:

Stacked Column Chart

Insight/Decision:

- High-contributing categories → Increase marketing spend.

- Low-contributing categories → Review product strategy.
 - Helps understand portfolio mix.
-

F) Sales vs Profit Movement

Business Problem:

Does profit follow the same trend as sales?

Business Requirement:

Compare Sales (Volume) vs Profit (Margin) together.

Visual Used:

Combo Chart

- Sales → Column
- Profit → Line

Insight/Decision:

- High sales but low profit → Heavy discounting or costly operations.
 - Low sales but high profit → Premium products performing well.
 - Balanced movement → Healthy business.
-

4. Skills Demonstrated

- Basic Power BI Visualizations
 - Data Cleaning & Modelling
 - Trend Analysis
 - Category Contribution Analysis
 - KPI Interpretation
 - Business Decision-Making
 - Real-world Retail Performance Evaluation
-

5. Dataset Used

Three tables:

1. **Sales (Fact Table)**
 2. **Customers (Dimension)**
 3. **Product Master (Dimension)**
(All included in your GitHub repo.)
-

6. Outcome

Using simple yet powerful basic charts, FreshKart leadership can now:

- Identify monthly performance patterns

- Optimize marketing budgets
- Improve inventory planning
- Detect category-level opportunities
- Balance sales and profitability strategies

This case study demonstrates how **basic Power BI charts** can solve meaningful real-world business problems and help companies make informed decisions.
